

Extra Credit #5

Due: February 27, 2012

Points: 100

As for all earlier assignments, please put refinements for all your programs into one file called “refinements.txt” or “refinements.pdf”, and error journal entries for all your programs into one file called “errors.txt” or “errors.pdf”.

Submit this program in the Extra Credit 5 area of SmartSite—not in the Homework 5 area.

1. (*30 points*) Modify your program in problem 1 to read an initial value of `wordlist` from the file “words.txt”. That is, before entering the “while” loop in the main routine, the program should read the words from the file “words.txt” (one word per line) and set `wordlist` to contain only those words.

Submit: Please turn in your program in the file “ls1b.py”.
