

## Outline for May 23, 2007

1. Greetings and felicitations!
2. How to write a program
  - a. Problem: read some text, and say whether or not there are any capital letters in it
  - b. Pseudocode: read string, check characters
  - c. Python #1: use a while loop and sentry variable
  - d. Python #2: use a for loop with character positions; show break statement
  - e. Python #3: use a for loop with “in” operator
