

Outline for May 25, 2007

1. Greetings and felicitations!
2. How to write a program
 - a. Problem: read some text, and say whether or not there are any capital letters in it
 - b. Pseudocode: read string, check characters
 - c. Python #1: use a while loop and check whether you get to the end of the line
 - d. Python #2: use a while loop with a sentry variable
 - e. Python #3: use a for loop with “in” operator and a break
