Sample Midterm

These are sample questions that are very similar to the ones I will ask on the midterm.

1. Which of the following is not a valid C variable name?
   (a) hello
   (b) chomp_burp
   (c) whilex
   (d) more-more-more
   (e) TrUcKiNg

2. Evaluate the following expressions, assuming a = 1, b = -3, and c = 0. Treat them independently, so (for example) after evaluating (b), use the above values for (c).
   (a) a + b < c
   (b) c == !a == c
   (c) a = ++b; give the values of both a and b as well
   (d) a-- == !b; give the value of a as well
   (e) a / b

3. True or False: If x = -1, then if (x) printf("1"); else printf("2"); prints 2.

4. Write a recursive function to add the integers from a to b. Please assume that a ≤ b.

5. What are all possible outputs of the following code fragment?
   ```c
   void f(int a, int b)
   {
   printf("%d %d
", a, b);
   }
   
   void main(void)
   {
   int i = 5;
   f(i++, i++);
   }
   ```

6. Given the definitions
   ```c
   int numbs[10];
   int *ptr = numbs;
   ```
   which of the following are equivalent, and why?
   (a) numbs[3]
   (b) numbs + 3
   (c) *(numbs + 3)
   (d) *(ptr + 3)
   (e) *ptr + 3

7. Use the following code fragment to answer parts (a), (b), and (c):
   ```c
   for(x = i = 0; i <= 100; i += 2, x += 1);
   ```
   (a) In one short sentence, what does this for loop do?

   (b) Is the following while loop equivalent? If not, how does its result differ? (Hint: look at the values of both x and i.)
   ```c
   x = i = 0;
   while( i++ <= 100)
   x += ++i;
   ```

   (c) Does the following for loop do the same thing? If not, what does it do?
for(x = i = 0; i <= 100; i++){
    if (!(i % 2))
        continue;
    x = x + i;
}

8. What does this function do?

char *x(char *s, char c)
{
    char *r = NULL;
    do{
        while(*s && *s != c)
            s++;
        if (*s)
            r = s;
    } while(*s++);
    return(r);
}

9. The following segment of code is supposed to print the number of times the routine a_again is called. Yet, regardless of the input, it prints 0. Why? How would you fix it?

void a_again(int acount)
{
    ++acount;
}

int main(void)
{
    int c;
    int counter = 0;
    while((c = getchar()) != EOF)
        if (c == 'a' || c == 'A')
            a_again(counter);
    printf("%d\n", counter);
    return(0);
}
