

Puzzle for March 3, 2006

What do you think of the following homework assignment?

This is not an assignment for this class. I am *only* asking what you think of it. The assignment is reported on the web at <http://isc.sans.org/diary.php?storyid=1155>.

The TASK

Student is to perform a remote security evaluation of one or more computer systems. The evaluation should be conducted over the Internet, using tools available in the public domain.

What the student must submit

In conducting this work, you should imagine yourself to be a security contracted by the owner of the computer system(s) to perform a security evaluation.

The student must provide a written report which has the following sections: Executive summary, description of tools and techniques used, dates and times of investigations, examples of data collected, evaluation data, overall evaluation of the system(s) including vulnerabilities.
