

Lecture 14 Outline

May 2, 2018

Reading: §10.2.5–10.3, F

Assignments: Homework 3, due on May 9, 2018 at 11:59pm
Lab 2, due on May 7, 2018 at 11:59pm

1. Product ciphers: AES
2. Public-Key Cryptography
 - a. Basic idea: 2 keys, one private, one public
 - b. Cryptosystem must satisfy:
 - i. Given public key, computationally infeasible to get private key;
 - ii. Cipher withstands chosen plaintext attack;
 - iii. Encryption, decryption computationally feasible (*note*: commutativity not required)
 - c. Benefits: can give confidentiality or authentication or both
3. Use of public key cryptosystem
 - a. Normally used as key interchange system to exchange secret keys (cheap)
 - b. Then use secret key system (too expensive to use public key cryptosystem for this)
4. RSA
 - a. Provides both authenticity and confidentiality
 - b. Go through algorithm:
Idea: $C = M^e \bmod n$, $M = C^d \bmod n$, with $ed \bmod \phi(n) = 1$
Public key is (e, n) ; private key is d . Choose $n = pq$; then $\phi(n) = (p-1)(q-1)$.
 - c. Example: $p = 5$, $q = 7$; then $n = 35$, $\phi(n) = (5-1)(7-1) = 24$. Pick $d = 11$. Then $ed \bmod \phi(n) = 1$, so $e = 11$
To encipher 2, $C = M^e \bmod n = 2^{11} \bmod 35 = 2048 \bmod 35 = 18$, and $M = C^d \bmod n = 18^{11} \bmod 35 = 2$.
 - d. Example: $p = 53$, $q = 61$; then $n = 3233$, $\phi(n) = (53-1)(61-1) = 3120$. Pick $d = 791$. Then $e = 71$
To encipher $M = \text{RENAISSANCE}$, use the mapping A = 00, B = 01, ..., Z = 25, $\emptyset = 26$.
Then: $M = \text{RE NA IS SA NC E}\emptyset = 1704\ 1300\ 0818\ 1800\ 1302\ 0426$
So: $C = (1704)^{71} \bmod 3233 = 3106; \dots = 3106\ 0100\ 0931\ 2691\ 1984\ 2927$
