General Information

Instructor  Matt Bishop; office: 3059 Kemper Hall; phone: 752-8060
            Email: bishop@cs.ucdavis.edu; web: http://seclab.cs.ucdavis.edu/~bishop
            Office hours: to be arranged, by appointment or by chance

Lectures   TuTh 9:00–10:20AM in 3 Temporary Classroom

Discussion Sections F4:10PM–5:00PM in 166 Chemistry

Course Outline  Introduce basic ideas of computer security; present security issues involving the web,
                     systems, and programs; teach you how to be a “critical consumer” of security products

Course Goals Some goals we hope you achieve:
1.  learn what computer security is;
2.  learn how to write a program without common security problems;
3.  learn how to evaluate the security of a system or program;
4.  learn how about Internet security; and
5.  see how security arises in everyday life.

Prerequisites The prerequisites for this course are ECS 30 or equivalent programming skills, and Math 21C.

Text none; papers and other material given out in class

Computers All registered students have been given an account on the computer science instructional
            machines in the basement. If you have not done so already, please change your password
            from the default as soon as you can. If it is not changed within a week, your account will
            be disabled and you will have to see a system programmer to have it reset.

Class Web Site The class web site is on MyUCDavis. To access it, go to
            http://my.ucdavis.edu and log in using your campus-wide login and password. Then go to
            ECS 155 in your schedule. Handouts and other documents will be posted there. I will also
            post announcements there, too.
            If you do not have access to MyUCDavis, you can go to the alternate web site at
            http://nob.cs.ucdavis.edu/classes/ecs155-2005-04. You can download the handouts from
            that site, but you cannot look at your grades there.

Class Newsgroup Information about this class, homework assignments, and so forth, will be posted to the
            newsgroup ucd.class.ecs155. Read this newsgroup daily! I’ll use it to put out important
            information. Please do not post to this newsgroup. If you want to post things about the class,
            please use the appropriate discussion newsgroup (ucd.class.ecs155.d). Discussing
            something in that newsgroup is perfectly fair.

Homework All work is due at 11:55PM on the date stated on the homework, unless otherwise stated.
            See the handout All About Homework for more information.

Extra Credit Extra credit in this course will be tallied separately from regular scores. If you end up on a
            borderline between two grades at the end of the course, extra credit will count in your favor.
            However, failure to do extra credit will never be counted against you, because grades are
            assigned on the basis of regular scores. You should do extra credit if you find it interesting
            and think that it might teach you something. Remember, though, it is not wise to skimp on
            the regular assignment in order to do extra credit!
**Grading**

25% Homework  
25% Midterm exam  
25% Programs  
25% Final exam

**Exams**

*Midterm* — Tuesday, November 1, 2005 in class  
*Final* — Tuesday, December 13, 2005, 10:30AM–12:30PM

These are open handout/open notes exams. No early or late exam will be given; if you miss an exam for medical reasons (you *must* document this; no other excuses are acceptable), you may be allowed or required to take a make-up exam, or the other parts of the course will be counted proportionally more (the choice is mine). In particular, forgetting the time or place of an exam is *not* an excuse for missing it!

**Academic Integrity**

Please see the Fall 2005 Class Schedule and Room Directory for a general discussion of this. In particular, for this course:

- All work submitted for credit must be your own. You may discuss your assignments with classmates, with instructors, or with teaching assistants or readers in the course to get ideas or a critique of your ideas, but the ideas and words you submit must be your own. Unless explicitly stated otherwise, collaboration is considered cheating and will be dealt with accordingly.
- For written homework, you must write up your own solutions and may neither read nor copy another student’s solutions.
- For programs, you must create and type in your own code and document it yourself.

*Note that you are free to seek help while debugging a program once it is written.*

A good analogy between appropriate discussion and inappropriate collaboration is the following: you and a fellow student work for competing software companies developing different products to meet a given specification. You and your competitor might choose to discuss product specifications and general techniques employed in your products, but you certainly would not discuss or exchange proprietary information revealing details of your products. Ask me for clarification beforehand if the above rules are not clear.
