

Expressive Power

- How do the sets of systems that models can describe compare?
 - If HRU equivalent to SPM, SPM provides more specific answer to safety question
 - If HRU describes more systems, SPM applies only to the systems it can describe

April 13, 2004

ECS 235

Slide #1

HRU *vs.* SPM

- SPM more abstract
 - Analyses focus on limits of model, not details of representation
- HRU allows revocation
 - SMP has no equivalent to delete, destroy
- HRU allows multiparent creates
 - SPM cannot express multiparent creates easily, and not at all if the parents are of different types because can•create allows for only one type of creator

April 13, 2004

ECS 235

Slide #2

Multiparent Create

- Solves mutual suspicion problem
 - Create proxy jointly, each gives it needed rights

- In HRU:

```
command multicreate(s0, s1, o)  
if r in a[s0, s1] and r in a[s1, s0]  
then  
  create object o;  
  enter r into a[s0, o];  
  enter r into a[s1, o];  
end
```

April 13, 2004

ECS 235

Slide #3

SPM and Multiparent Create

- can create extended in obvious way
 - $cc \subseteq TS \times \dots \times TS \times T$
- Symbols
 - $\mathbf{X}_1, \dots, \mathbf{X}_n$ parents, \mathbf{Y} created
 - $R_{1,i}, R_{2,i}, R_3, R_{4,i} \subseteq R$
- Rules
 - $cr_{p,i}(\tau(\mathbf{X}_1), \dots, \tau(\mathbf{X}_n)) = \mathbf{Y}/R_{1,1} \cup \mathbf{X}_i/R_{2,i}$
 - $cr_C(\tau(\mathbf{X}_1), \dots, \tau(\mathbf{X}_n)) = \mathbf{Y}/R_3 \cup \mathbf{X}_1/R_{4,1} \cup \dots \cup \mathbf{X}_n/R_{4,n}$

April 13, 2004

ECS 235

Slide #4

Example

- Anna, Bill must do something cooperatively
 - But they don't trust each other
- Jointly create a proxy
 - Each gives proxy only necessary rights
- In ESPM:
 - Anna, Bill type a ; proxy type p ; right $x \in R$
 - $cc(a, a) = p$
 - $cr_{\text{Anna}}(a, a, p) = cr_{\text{Bill}}(a, a, p) = \emptyset$
 - $cr_{\text{proxy}}(a, a, p) = \{ \text{Anna}/x, \text{Bill}/x \}$

April 13, 2004

ECS 235

Slide #5

2-Parent Joint Create Suffices

- Goal: emulate 3-parent joint create with 2-parent joint create
- Definition of 3-parent joint create (subjects $\mathbf{P}_1, \mathbf{P}_2, \mathbf{P}_3$; child \mathbf{C}):
 - $cc(\tau(\mathbf{P}_1), \tau(\mathbf{P}_2), \tau(\mathbf{P}_3)) = Z \subseteq T$
 - $cr_{\mathbf{P}_1}(\tau(\mathbf{P}_1), \tau(\mathbf{P}_2), \tau(\mathbf{P}_3)) = \mathbf{C}/R_{1,1} \cup \mathbf{P}_1/R_{2,1}$
 - $cr_{\mathbf{P}_2}(\tau(\mathbf{P}_1), \tau(\mathbf{P}_2), \tau(\mathbf{P}_3)) = \mathbf{C}/R_{2,1} \cup \mathbf{P}_2/R_{2,2}$
 - $cr_{\mathbf{P}_3}(\tau(\mathbf{P}_1), \tau(\mathbf{P}_2), \tau(\mathbf{P}_3)) = \mathbf{C}/R_{3,1} \cup \mathbf{P}_3/R_{2,3}$

April 13, 2004

ECS 235

Slide #6

General Approach

- Define agents for parents and child
 - Agents act as surrogates for parents
 - If create fails, parents have no extra rights
 - If create succeeds, parents, child have exactly same rights as in 3-parent creates
 - Only extra rights are to agents (which are never used again, and so these rights are irrelevant)

April 13, 2004

ECS 235

Slide #7

Entities and Types

- Parents $\mathbf{P}_1, \mathbf{P}_2, \mathbf{P}_3$ have types p_1, p_2, p_3
- Child \mathbf{C} of type c
- Parent agents $\mathbf{A}_1, \mathbf{A}_2, \mathbf{A}_3$ of types a_1, a_2, a_3
- Child agent \mathbf{S} of type s
- Type t is parentage
 - if $\mathbf{X}/t \in \text{dom}(\mathbf{Y})$, \mathbf{X} is \mathbf{Y} 's parent
- Types t, a_1, a_2, a_3, s are new types

April 13, 2004

ECS 235

Slide #8

Can•Create

- Following added to can•create:

- $cc(p_1) = a_1$
- $cc(p_2, a_1) = a_2$
- $cc(p_3, a_2) = a_3$
 - Parents creating their agents; note agents have maximum of 2 parents
- $cc(a_3) = s$
 - Agent of all parents creates agent of child
- $cc(s) = c$
 - Agent of child creates child

April 13, 2004

ECS 235

Slide #9

Creation Rules

- Following added to create rule:

- $cr_p(p_1, a_1) = \emptyset$
- $cr_c(p_1, a_1) = p_1/Rtc$
 - Agent's parent set to creating parent; agent has all rights over parent
- $cr_{p_{first}}(p_2, a_1, a_2) = \emptyset$
- $cr_{p_{second}}(p_2, a_1, a_2) = \emptyset$
- $cr_c(p_2, a_1, a_2) = p_2/Rtc \cup a_1/tc$
 - Agent's parent set to creating parent and agent; agent has all rights over parent (but not over agent)

April 13, 2004

ECS 235

Slide #10

Creation Rules

- $cr_{P_{first}}(p_3, a_2, a_3) = \emptyset$
- $cr_{P_{second}}(p_3, a_2, a_3) = \emptyset$
- $cr_C(p_3, a_2, a_3) = p_3/Rtc \cup a_2/tc$
 - Agent's parent set to creating parent and agent; agent has all rights over parent (but not over agent)
- $cr_p(a_3, s) = \emptyset$
- $cr_C(a_3, s) = a_3/tc$
 - Child's agent has third agent as parent $cr_p(a_3, s) = \emptyset$
- $cr_p(s, c) = C/Rtc$
- $cr_C(s, c) = c/R_3t$
 - Child's agent gets full rights over child; child gets R_3 rights over agent

April 13, 2004

ECS 235

Slide #11

Link Predicates

- Idea: no tickets to parents until child created
 - Done by requiring each agent to have its own parent rights
 - $link_1(\mathbf{A}_1, \mathbf{A}_2) = \mathbf{A}_1/t \in dom(\mathbf{A}_2) \wedge \mathbf{A}_2/t \in dom(\mathbf{A}_2)$
 - $link_1(\mathbf{A}_2, \mathbf{A}_3) = \mathbf{A}_2/t \in dom(\mathbf{A}_3) \wedge \mathbf{A}_3/t \in dom(\mathbf{A}_3)$
 - $link_2(\mathbf{S}, \mathbf{A}_3) = \mathbf{A}_3/t \in dom(\mathbf{S}) \wedge \mathbf{C}/t \in dom(\mathbf{C})$
 - $link_3(\mathbf{A}_1, \mathbf{C}) = \mathbf{C}/t \in dom(\mathbf{A}_1)$
 - $link_3(\mathbf{A}_2, \mathbf{C}) = \mathbf{C}/t \in dom(\mathbf{A}_2)$
 - $link_3(\mathbf{A}_3, \mathbf{C}) = \mathbf{C}/t \in dom(\mathbf{A}_3)$
 - $link_4(\mathbf{A}_1, \mathbf{P}_1) = \mathbf{P}_1/t \in dom(\mathbf{A}_1) \wedge \mathbf{A}_1/t \in dom(\mathbf{A}_1)$
 - $link_4(\mathbf{A}_2, \mathbf{P}_2) = \mathbf{P}_2/t \in dom(\mathbf{A}_2) \wedge \mathbf{A}_2/t \in dom(\mathbf{A}_2)$
 - $link_4(\mathbf{A}_3, \mathbf{P}_3) = \mathbf{P}_3/t \in dom(\mathbf{A}_3) \wedge \mathbf{A}_3/t \in dom(\mathbf{A}_3)$

April 13, 2004

ECS 235

Slide #12

Filter Functions

- $f_1(a_2, a_1) = a_1/t \cup c/Rtc$
- $f_1(a_3, a_2) = a_2/t \cup c/Rtc$
- $f_2(s, a_3) = a_3/t \cup c/Rtc$
- $f_3(a_1, c) = p_1/R_{4,1}$
- $f_3(a_2, c) = p_2/R_{4,2}$
- $f_3(a_3, c) = p_3/R_{4,3}$
- $f_4(a_1, p_1) = c/R_{1,1} \cup p_1/R_{2,1}$
- $f_4(a_2, p_2) = c/R_{1,2} \cup p_2/R_{2,2}$
- $f_4(a_3, p_3) = c/R_{1,3} \cup p_3/R_{2,3}$

April 13, 2004

ECS 235

Slide #13

Construction

Create $\mathbf{A}_1, \mathbf{A}_2, \mathbf{A}_3, \mathbf{S}, \mathbf{C}$; then

- \mathbf{P}_1 has no relevant tickets
- \mathbf{P}_2 has no relevant tickets
- \mathbf{P}_3 has no relevant tickets
- \mathbf{A}_1 has \mathbf{P}_1/Rtc
- \mathbf{A}_2 has $\mathbf{P}_2/Rtc \cup \mathbf{A}_1/tc$
- \mathbf{A}_3 has $\mathbf{P}_3/Rtc \cup \mathbf{A}_2/tc$
- \mathbf{S} has $\mathbf{A}_3/tc \cup \mathbf{C}/Rtc$
- \mathbf{C} has \mathbf{C}/R_3

April 13, 2004

ECS 235

Slide #14

Construction

- Only $link_2(\mathbf{S}, \mathbf{A}_3)$ true \Rightarrow apply f_2
 - \mathbf{A}_3 has $\mathbf{P}_3/Rtc \cup \mathbf{A}_2/t \cup \mathbf{A}_3/t \cup \mathbf{C}/Rtc$
- Now $link_1(\mathbf{A}_3, \mathbf{A}_2)$ true \Rightarrow apply f_1
 - \mathbf{A}_2 has $\mathbf{P}_2/Rtc \cup \mathbf{A}_1/tc \cup \mathbf{A}_2/t \cup \mathbf{C}/Rtc$
- Now $link_1(\mathbf{A}_2, \mathbf{A}_1)$ true \Rightarrow apply f_1
 - \mathbf{A}_1 has $\mathbf{P}_2/Rtc \cup \mathbf{A}_1/tc \cup \mathbf{A}_1/t \cup \mathbf{C}/Rtc$
- Now all $link_3$ s true \Rightarrow apply f_3
 - \mathbf{C} has $\mathbf{C}/R_3 \cup \mathbf{P}_1/R_{4,1} \cup \mathbf{P}_2/R_{4,2} \cup \mathbf{P}_3/R_{4,3}$

April 13, 2004

ECS 235

Slide #15

Finish Construction

- Now $link_4$ s true \Rightarrow apply f_4
 - \mathbf{P}_1 has $\mathbf{C}/R_{1,1} \cup \mathbf{P}_1/R_{2,1}$
 - \mathbf{P}_2 has $\mathbf{C}/R_{1,2} \cup \mathbf{P}_2/R_{2,2}$
 - \mathbf{P}_3 has $\mathbf{C}/R_{1,3} \cup \mathbf{P}_3/R_{2,3}$
- 3-parent joint create gives same rights to \mathbf{P}_1 , \mathbf{P}_2 , \mathbf{P}_3 , \mathbf{C}
- If create of \mathbf{C} fails, $link_2$ fails, so construction fails

April 13, 2004

ECS 235

Slide #16

Theorem

- The two-parent joint creation operation can implement an n -parent joint creation operation with a fixed number of additional types and rights, and augmentations to the link predicates and filter functions.
- **Proof:** by construction, as above
 - Difference is that the two systems need not start at the same initial state

April 13, 2004

ECS 235

Slide #17

Theorems

- Monotonic ESPM and the monotonic HRU model are equivalent.
- Safety question in ESPM also decidable if acyclic attenuating scheme

April 13, 2004

ECS 235

Slide #18

Expressiveness

- Graph-based representation to compare models
- Graph
 - Vertex: represents entity, has static type
 - Edge: represents right, has static type
- Graph rewriting rules:
 - Initial state operations create graph in a particular state
 - Node creation operations add nodes, incoming edges
 - Edge adding operations add new edges between existing vertices

April 13, 2004

ECS 235

Slide #19

Example: 3-Parent Joint Creation

- Simulate with 2-parent
 - Nodes \mathbf{P}_1 , \mathbf{P}_2 , \mathbf{P}_3 parents
 - Create node \mathbf{C} with type c with edges of type e
 - Add node \mathbf{A}_1 of type a and edge from \mathbf{P}_1 to \mathbf{A}_1 of type e'

April 13, 2004

ECS 235

Slide #20

Next Step

- A_1, P_2 create A_2 ; A_2, P_3 create A_3
- Type of nodes, edges are a and e'

April 13, 2004

ECS 235

Slide #21

Next Step

- A_3 creates S , of type a
- S creates C , of type c

April 13, 2004

ECS 235

Slide #22

Last Step

- Edge adding operations:
 - $P_1 \rightarrow A_1 \rightarrow A_2 \rightarrow A_3 \rightarrow S \rightarrow C$: P_1 to C edge type e
 - $P_2 \rightarrow A_2 \rightarrow A_3 \rightarrow S \rightarrow C$: P_2 to C edge type e
 - $P_3 \rightarrow A_3 \rightarrow S \rightarrow C$: P_3 to C edge type e

April 13, 2004

ECS 235

Slide #23

Definitions

- *Scheme*: graph representation as above
- *Model*: set of schemes
- Schemes A, B correspond if graph for both is identical when all nodes with types not in A and edges with types in A are deleted

April 13, 2004

ECS 235

Slide #24

Example

- Above 2-parent joint creation simulation in scheme *TWO*
- Equivalent to 3-parent joint creation scheme *THREE* in which $\mathbf{P}_1, \mathbf{P}_2, \mathbf{P}_3, \mathbf{C}$ are of same type as in *TWO*, and edges from $\mathbf{P}_1, \mathbf{P}_2, \mathbf{P}_3$ to \mathbf{C} are of type e , and no types a and e' exist in *TWO*

April 13, 2004

ECS 235

Slide #25

Simulation

Scheme A simulates scheme B iff

- every state B can reach has a corresponding state in A that A can reach; and
- every state that A can reach either corresponds to a state B can reach, or has a successor state that corresponds to a state B can reach
 - The last means that A can have intermediate states not corresponding to states in B , like the intermediate ones in *TWO* in the simulation of *THREE*

April 13, 2004

ECS 235

Slide #26

Expressive Power

- If scheme in MA no scheme in MB can simulate, MB less expressive than MA
- If every scheme in MA can be simulated by a scheme in MB , MB as expressive as MA
- If MA as expressive as MB and *vice versa*, MA and MB equivalent

April 13, 2004

ECS 235

Slide #27

Example

- Scheme A in model M
 - Nodes $\mathbf{X}_1, \mathbf{X}_2, \mathbf{X}_3$
 - 2-parent joint create
 - 1 node type, 1 edge type
 - No edge adding operations
 - Initial state: $\mathbf{X}_1, \mathbf{X}_2, \mathbf{X}_3$, no edges
- Scheme B in model N
 - All same as A except no 2-parent joint create
 - 1-parent create
- Which is more expressive?

April 13, 2004

ECS 235

Slide #28

Can A Simulate B ?

- Scheme A simulates 1-parent create: have both parents be same node
 - Model M as expressive as model N

April 13, 2004

ECS 235

Slide #29

Can B Simulate A ?

- Suppose $\mathbf{X}_1, \mathbf{X}_2$ jointly create \mathbf{Y} in A
 - Edges from $\mathbf{X}_1, \mathbf{X}_2$ to \mathbf{Y} , no edge from \mathbf{X}_3 to \mathbf{Y}
- Can B simulate this?
 - Without loss of generality, \mathbf{X}_1 creates \mathbf{Y}
 - Must have edge adding operation to add edge from \mathbf{X}_2 to \mathbf{Y}
 - One type of node, one type of edge, so operation can add edge between any 2 nodes

April 13, 2004

ECS 235

Slide #30

No

- All nodes in A have even number of incoming edges
 - 2-parent create adds 2 incoming edges
- Edge adding operation in B that can edge from X_2 to C can add one from X_3 to C
 - A cannot enter this state
 - B cannot transition to a state in which Y has even number of incoming edges
 - No remove rule
- So B cannot simulate A ; N less expressive than M

April 13, 2004

ECS 235

Slide #31

Theorem

- Monotonic single-parent models are less expressive than monotonic multiparent models
- ESPM more expressive than SPM
 - ESPM multiparent and monotonic
 - SPM monotonic but single parent

April 13, 2004

ECS 235

Slide #32

Typed Access Matrix Model

- Like ACM, but with set of types T
 - All subjects, objects have types
 - Set of types for subjects TS
- Protection state is (S, O, τ, A) , where $\tau: O \rightarrow T$ specifies type of each object
 - If \mathbf{X} subject, $\tau(\mathbf{X})$ in TS
 - If \mathbf{X} object, $\tau(\mathbf{X})$ in $T - TS$

April 13, 2004

ECS 235

Slide #33

Create Rules

- Subject creation
 - **create subject s of type ts**
 - s must not exist as subject or object when operation executed
 - $ts \in TS$
- Object creation
 - **create object o of type to**
 - o must not exist as subject or object when operation executed
 - $to \in T - TS$

April 13, 2004

ECS 235

Slide #34

Create Subject

- Precondition: $s \notin S$
- Primitive command: **create subject s of type t**
- Postconditions:
 - $S' = S \cup \{s\}$, $O' = O \cup \{s\}$
 - $(\forall y \in O)[\tau'(y) = \tau(y)]$, $\tau'(s) = t$
 - $(\forall y \in O')[a'[s, y] = \emptyset]$, $(\forall x \in S')[a'[x, s] = \emptyset]$
 - $(\forall x \in S)(\forall y \in O)[a'[x, y] = a[x, y]]$

April 13, 2004

ECS 235

Slide #35

Create Object

- Precondition: $o \notin O$
- Primitive command: **create object o of type t**
- Postconditions:
 - $S' = S$, $O' = O \cup \{o\}$
 - $(\forall y \in O)[\tau'(y) = \tau(y)]$, $\tau'(o) = t$
 - $(\forall x \in S')[a'[x, o] = \emptyset]$
 - $(\forall x \in S)(\forall y \in O)[a'[x, y] = a[x, y]]$

April 13, 2004

ECS 235

Slide #36

Definitions

- **MTAM Model**: TAM model without **delete**, **destroy**
 - MTAM is Monotonic TAM
- $\alpha(x_1:t_1, \dots, x_n:t_n)$ **create command**
 - t_i child type in α if any of **create subject x_i of type t_i** or **create object x_i of type t_i** occur in α
 - t_i parent type otherwise

April 13, 2004

ECS 235

Slide #37

Cyclic Creates

```
command havoc( $s_1 : u, s_2 : u, o_1 : v, o_2 : v, o_3 : w, o_4 : w$ )  
  create subject  $s_1$  of type  $u$ ;  
  create object  $o_1$  of type  $v$ ;  
  create object  $o_3$  of type  $w$ ;  
  enter  $r$  into  $a[s_2, s_1]$ ;  
  enter  $r$  into  $a[s_2, o_2]$ ;  
  enter  $r$  into  $a[s_2, o_4]$   
end
```

April 13, 2004

ECS 235

Slide #38

Creation Graph

- u, v, w child types
- u, v, w also parent types
- Graph: lines from parent types to child types
- This one has cycles

April 13, 2004

ECS 235

Slide #39

Theorems

- Safety decidable for systems with acyclic MTAM schemes
- Safety for acyclic ternary MATM decidable in time polynomial in the size of initial ACM
 - “ternary” means commands have no more than 3 parameters
 - Equivalent in expressive power to MTAM

April 13, 2004

ECS 235

Slide #40

Key Points

- Safety problem undecidable
- Limiting scope of systems can make problem decidable
- Types critical to safety problem's analysis

April 13, 2004

ECS 235

Slide #41

Overview

- Overview
- Policies
- Trust
- Nature of Security Mechanisms
- Policy Expression Languages
- Limits on Secure and Precise Mechanisms

April 13, 2004

ECS 235

Slide #42

Security Policy

- Policy partitions system states into:
 - Authorized (secure)
 - These are states the system can enter
 - Unauthorized (nonsecure)
 - If the system enters any of these states, it's a security violation
- Secure system
 - Starts in authorized state
 - Never enters unauthorized state

April 13, 2004

ECS 235

Slide #43

Confidentiality

- X set of entities, I information
- I has *confidentiality* property with respect to X if no x in X can obtain information from I
- I can be disclosed to others
- Example:
 - X set of students
 - I final exam answer key
 - I is confidential with respect to X if students cannot obtain final exam answer key

April 13, 2004

ECS 235

Slide #44

Integrity

- X set of entities, I information
- I has *integrity* property with respect to X if all x in X trust information in I
- Types of integrity:
 - trust I, its conveyance and protection (data integrity)
 - I information about origin of something or an identity (origin integrity, authentication)
 - I resource: means resource functions as it should (assurance)

April 13, 2004

ECS 235

Slide #45

Availability

- X set of entities, I resource
- I has *availability* property with respect to X if all x in X can access I
- Types of availability:
 - traditional: x gets access or not
 - quality of service: promised a level of access (for example, a specific level of bandwidth) and not meet it, even though some access is achieved

April 13, 2004

ECS 235

Slide #46

Policy Models

- Abstract description of a policy or class of policies
- Focus on points of interest in policies
 - Security levels in multilevel security models
 - Separation of duty in Clark-Wilson model
 - Conflict of interest in Chinese Wall model

April 13, 2004

ECS 235

Slide #47

Types of Security Policies

- Military (governmental) security policy
 - Policy primarily protecting confidentiality
- Commercial security policy
 - Policy primarily protecting integrity
- Confidentiality policy
 - Policy protecting only confidentiality
- Integrity policy
 - Policy protecting only integrity

April 13, 2004

ECS 235

Slide #48

Integrity and Transactions

- Begin in consistent state
 - “Consistent” defined by specification
- Perform series of actions (*transaction*)
 - Actions cannot be interrupted
 - If actions complete, system in consistent state
 - If actions do not complete, system reverts to beginning (consistent) state

April 13, 2004

ECS 235

Slide #49

Trust

Administrator installs patch

1. Trusts patch came from vendor, not tampered with in transit
2. Trusts vendor tested patch thoroughly
3. Trusts vendor's test environment corresponds to local environment
4. Trusts patch is installed correctly

April 13, 2004

ECS 235

Slide #50

Trust in Formal Verification

- Gives formal mathematical proof that given input i , program P produces output o as specified
- Suppose a security-related program S formally verified to work with operating system O
- What are the assumptions?

April 13, 2004

ECS 235

Slide #51

Trust in Formal Methods

1. Proof has no errors
 - Bugs in automated theorem provers
2. Preconditions hold in environment in which S is to be used
3. S transformed into executable S' whose actions follow source code
 - Compiler bugs, linker/loader/library problems
4. Hardware executes S' as intended
 - Hardware bugs (Pentium f00f bug, for example)

April 13, 2004

ECS 235

Slide #52

Types of Access Control

- Discretionary Access Control (DAC, IBAC)
 - individual user sets access control mechanism to allow or deny access to an object
- Mandatory Access Control (MAC)
 - system mechanism controls access to object, and individual cannot alter that access
- Originator Controlled Access Control (ORCON)
 - originator (creator) of information controls who can access information

April 13, 2004

ECS 235

Slide #53

Question

- Policy disallows cheating
 - Includes copying homework, with or without permission
- CS class has students do homework on computer
- Anne forgets to read-protect her homework file
- Bill copies it
- Who cheated?
 - Anne, Bill, or both?

April 13, 2004

ECS 235

Slide #54

Answer Part 1

- Bill cheated
 - Policy forbids copying homework assignment
 - Bill did it
 - System entered unauthorized state (Bill having a copy of Anne's assignment)
- If not explicit in computer security policy, certainly implicit
 - Not credible that a unit of the university allows something that the university as a whole forbids, unless the unit explicitly says so

April 13, 2004

ECS 235

Slide #55

Answer Part #2

- Anne didn't protect her homework
 - Not required by security policy
- She didn't breach security
- If policy said students had to read-protect homework files, then Anna did breach security
 - She didn't do so

April 13, 2004

ECS 235

Slide #56

Mechanisms

- Entity or procedure that enforces some part of the security policy
 - Access controls (like bits to prevent someone from reading a homework file)
 - Disallowing people from bringing CDs and floppy disks into a computer facility to control what is placed on systems
