

Homework 2

Please find 1 or 2 articles, *dated before 2000*, that discusses the use of computers in elections. The computer can be used in any way; it need not be a voting machine. For example, an article describing the use of computers to keep track of registered voters meets this criterion.

Please enter the bibliographic information on each article (title, newspaper or magazine, date, author if credited, and URL if you get it off the Internet), and your name, onto the SmartSite Wiki. I've put an example there so you can see what I mean. Also, submit the same information to your drop box on Smartsite; that will time-stamp your selection, so if there is a conflict I can figure out who was first.

Important note. Each student must use different articles, so as soon as you identify the articles you want to use, enter them in the Wiki.
